Assignment 2 Overview

ASSIGNMENT 2

Design & Prototype an AI-Powered Feature

Identify a real user problem, design an AI-powered solution, and build a prototype that shows how it works.

SUBMISSION DEADLINE

12 July 2026, Sun • 11:30
PM IST

[Submit Assignment →](#)

This is an **individual assignment**. You have around 10 days to complete. Start as soon as possible. It is mandatory to complete and review assignments to get access to future ones.

**PRODUCT CONSTRAINT**

Do not continue with the same product you selected in Assignment 1. Pick a different product you love or use often.

Why This Assignment Matters Now

Help

really matters.

Now, in **Assignment 2**, it's time to shift gears: **designing possibilities and prototyping the same**.

The Product Management world is changing fast. PMs today aren't just storytellers. They're **builders of believable ideas**. In many companies, PMs are already being asked in interviews:

"How would you use AI to improve our product?"

"Can you sketch or prototype that feature right now?"

The ability to take a real-world problem, identify where AI creates value, and **visualise it** is becoming an essential skill. That's exactly what you'll practice here.

The Assignment

You are the Product Manager at a company whose product you love or use often.

YOUR MISSION

Identify **one meaningful opportunity** to improve this product using **AI**, then design and **prototype** how that improvement would actually work.

YOUR OBJECTIVE

Help

- **Uses AI in a natural, purposeful way**, not just as a buzzword
- **Can be demonstrated** through a prototype or short demo

Your Scope

A: BUILD & PROTOTYPE

Focus on **one product** and **one improvement**, a single PO problem worth solving. Then prototype your solution.

The improvement could:

- Help users accomplish something faster or smarter
- Automate a manual or repetitive step
- Personalize or recommend intelligently
- Improve decision-making, discovery, or trust

B: VALIDATE EXTERNALLY

Share your prototype solution with **PMs from that company or industry** to validate your understanding of the product and get real feedback.

This step pushes you to think like a PM operating in the real world, not just inside an assignment.

A well-designed feature that solves one sharp pain point is far more powerful than a vague "AI overhaul."

Prototyping Resources

Resources to help you build your prototype.

[Open Resources →](#)

DELIVERABLE	DESCRIPTION	FORMAT
Slide Deck	Max. 10 slides telling your product story: problem, user, AI solution, and impact.	PDF
Prototype / Demo	A clickable flow demonstrating how your AI-powered feature works in context.	LINK OR FILE
PRD	A Product Requirements Document focused on your solution.	PDF

Assignment 2 Submission

Your submission should include all three deliverables.

DELIVERABLE 1

Slide Deck:
Max 10 slides
telling your
product story -
problem, user,
AI solution, and
impact (PDF)

DELIVERABLE 2

Prototype /
Demo: A
clickable flow
demonstrating
how your AI-
powered
feature works
(Link or File)

DELIVERABLE 3

PRD: A Product
Requirements
Document
focused on
your solution
(PDF)

Deadline: 12 July 2026, Sun | 11:30 PM IST

File naming: Assignment 2 - [Your Name] C51 (Example:
Assignment 2 - Aakash C51)

After submitting: Check your status at Cohort 51 Submissions
(takes 3–5 minutes to reflect)
